OBJECTIVE

Software Engineer with hands-on experience in backend development, system integration, and application optimization using Golang, C++, and modern development practices. Skilled in API development, multi-threading, socket programming (WebSockets), database management, and containerized deployment. Adept at collaborating with cross-functional teams, preparing technical documentation, and delivering reliable, high-performance software solutions. Eager to apply strong problem-solving skills and a solid computer science foundation to contribute to application development and system integration in a fast-paced engineering environment.

EXPERIENCE

Backend Developer / Technical Officer

Feb 2025 - Present
Capregsoft

- Developed and maintained RESTful APIs using Golang, ensuring high performance and scalability for production-level services.
- Led the backend and frontend development of OroTracker.com, a real-time gold tracking platform, integrating database management, API logic, and secure endpoints.
- Built Skylink, a full-stack lead automation platform with FreeSWITCH/SIP-based real-time call handling.
- Conducted manual testing and API testing using Postman, ensuring reliability and identifying bugs.
- Created test cases, reported bugs, and collaborated through GitHub using branches, issues, and pull requests.
- Deployed the application on Kubernetes, managing containerized services and ensuring seamless scaling and availability.

Networking Intern

Nov 2024 - Jan 2025
eGeeks-Global

- Performed system troubleshooting and configured basic Sophos Firewall by categorizing.
- Managed and configured IT systems, including installation and setup of new hardware and software.
- Created and managed Zoom meeting links for online collaboration.
- Installed, maintained, and upgraded systems to ensure smooth IT operations.
- Documented IT processes, configurations, and troubleshooting steps for efficient workflow.

SKILLS

- Languages:** Go, C++, JavaScript, Python
- Frontend Development:** React.js, React Hooks, state management, REST API integration, responsive UI design
- Databases:** MySQL, PostgreSQL, MongoDB, Redis
- DevOps & Deployment:** Docker, Kubernetes, CI/CD pipelines, Ubuntu Linux
- Testing & QA:** Manual testing, API testing, Postman, debugging, bug reporting
- Version Control:** Git, GitHub
- Tools & Collaboration:** VS Code, Visual studio, Google meet, Zoom, Cursor, Jira, MS SQL Server
- Project Management:** Requirement gathering, sprint planning, task breakdown, documentation

EDUCATION

Bachelor Degree (Software Engineering)

2020 - 2024
HITEC University

CGPA: 3.43

PROJECTS

OroTracker.com (Project Leader)

- A web-based platform developed in Golang to track live gold rates. Involved complete backend setup, real-time API development, and deployment using Docker and Kubernetes.

Skylink - Intelligent Call Management & Lead Automation Platform (Full-Stack, FreeSWITCH/SIP)

- Designed and developed a full-stack call management and lead automation platform for real estate companies, automating agent-lead call initiation, recording, and engagement.
- Built robust telephony infrastructure using FreeSWITCH and SIP Trunk to handle real-time, high-volume call routing and recording.
- Integrated third-party platforms - WhatsApp, Mailchimp, ElevenLabs (AI voice), OpenAI, TikTok, Facebook, and Bitrix CRM - to enable AI-driven communication, automated lead nurturing, and real-time sales pipeline insights.
- Streamlined end-to-end lead lifecycle management, from social media lead capture to follow-up automation and CRM sync.

Chat Application (Go)

- Built a WebSocket-based real-time chatroom with user interaction and concurrent messaging support, showcasing Go's concurrency model.

File Analyzer Tool (Go)

- Developed a command-line application to parse and analyze large files efficiently using Go routines and memory optimization.

MailAvail – Email Verification Platform (Go + DevOps):

- Designed deployment specifications and Kubernetes manifests for a distributed email outbound verification system.
- Involved service definitions, queue-based processing, and CI/CD integration for automated rollout.

Banking Management System (C++)

- Designed and implemented a console-based banking system with account management, transaction history, and user interaction features using

CERTIFICATIONS / COMPETITIONS

HCIA-Datacom (Certification)

Acquired comprehensive knowledge of network fundamentals, routing and switching, and network security.

July 2023
Huawei

The Bits and Bytes of Computer Networking (Certification)

Get foundational knowledge on computer networking, covering protocols, networking services, and cloud computing.

August, 2024
Coursera (Google)

IOT Based Project Competition

Have participate in IOT based project competition by (GetInnovative) held in UET Taxila to compete with top notch Final year projects of different universities

May 29, 2024
UET Taxila

Huawei ICT Competition 2022-2023

Have take a part in Huawei ICT Competition 2022-2023 and selected in top 100 candidates from all over Pakistan.

Aug, 2023
HITEC University
